(54) Title: DIAGNOSTIC AND THERAPEUTIC USE OF STEROIDOGENIC ACUTE REGULATORY PROTEIN FOR NEURODEGENERATIVE DISEASES

Identification of genes involved in Alzheimer's Disease pathology

(57) Abstract: The present invention discloses the differential expression of the steroidogenic acute regulatory protein (StAR) gene in specific brain regions of Alzheimer's disease patients. Based on this finding, this invention provides a method for diagnosing or prognosticating a neurodegenerative disease, in particular Alzheimer's disease, in a subject, or for determining whether a subject is at increased risk of developing such a disease. Furthermore, this invention provides therapeutic and prophylactic methods for treating or preventing Alzheimer's disease and related neurodegenerative disorders using the StAR gene and gene products. A method of screening for modulating agents of neurodegenerative diseases is also disclosed.
